## This protein is one of two known receptors for both TNF-alpha
(cachectin) and TNF-beta (lymphotoxi).
                                                                                                                                                                                           207

Statistics: Mean 47.496; Variance 85.662; scale 0.554

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

MPsrch\_pp protein - protein database search, using Smith-Waterman algorithm

Run on: Tue Jul 25 22:20:00 2000; MasPar time 15.22 Seconds 871.530 Million cell updates/sec

Tabular output not generated.

Title: >US-09-314-889-2
Description: (1-428) from US09314889.pep
Perfect Score: 3267

Perfect Score: 3267
Sequence: 1 MEETQQGEAPRGQLRGESAA....ERMGLDGCVEDLRSRLQRGP 428

Scoring table: PAM 150
Gap 11

Searched: 85661 seqs, 30989116 residues

Post-processing: Minimum Match 0% Listing first 45 summaries

Database: swiss-prot38 1:swissprot

Statistics: Mean 48.842; Variance 83.135; scale 0.588

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

ALTERNATIVE PRODUCTS: THREE ISOFORMS; WSL-1/LARD-1A (SHOWN HERE),
WSL-SL/LARD-3 AND WSL-S2; ARE PRODUCED BY ALTERNATIVE SPLICING.
TISSUE SPECIFICITY: ABUNDANTLY EXPRESSED IN THYMOCYTES AND
LYMPHOCYTES. DETECTED IN LYMPHOCYTE-RICH TISSUES SUCH AS THYMUS,
COLON, INTESTINE, AND SPLEEN. ALSO FOUND IN THE PROSTATE.
PTM: GLYCOSYLATED (PROBABLE).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                (NF-KAPPAB). DIRECTLY INTERACTS WITH TRADD ADAPTATOR MOLECULE. MAPLAT A ROLE IN REGULATING LYMHOCCYTE HOMEOSTASIS.

SUBUNIT: HOMODIMER, INTERACTS STRONGLY VIA THE DEATH DOMAINS WITH THE TNFRI-ASSOCIATED MOLECULE TRADD AND THE TNRFI RECEPTOR TO ACTIVATE AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   PTM: GLYCOSYLATED (PROBABLE).
SIMILARITY: CONTAINS A LA-NGER/THER-TYPE CYSTEINE-RICH REGION.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         "Structures of the extracellular factor receptor.";
NF-KAPPA B SIGNALING.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
DOMAIN: THE DOMAIN THAT INDUCES A-SMASE IS PROBABLY IDENTICAL
THE DEATH DOMAIN. THE N-SMASE ACTIVATION DOMAIN (NSD) IS BOTH
NECESSARY AND SUFFICIENT FOR ACTIVATION OF N-SMASE.
SIMILARITY: CONTAINS A LA-NGFF/TNFR-TYPE CYSTEINE-RICH REGION.
DATABASE: NAME-PROW; NOTE-CD guide CD120a entry;
NWW-"http://www.ncbi.nlm.nih.gov/prow/cd/cd120a.htm".
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 FUNCTION: RECEPTOR FOR TWF-ALPHA. THE ADAPTOR MOLECULE FADD RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING AGGREGATE CALLED THE DEATH INUCLING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTEOLYTIC ACTIVATION WHICH INITIATES THE SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APOPTOSIS. CONTRIBUTES TO THE INDUCTION OF NONCYTOCIDAL TWF EFFECTS INCLUDING ANTI-VIRAL STATE AND ACTIVATION OF THE ACID SPLINGOMIYELINASE.
                                                                                                                                                                                                                                                                                                                                                                                            WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO THE COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX

MOI. IMMUDOI: 30:165-175(1993).

MOI. IMMUDOI: RECEPTOR FOR THE ALDHA. THE ADAPTOR MOLECULE FADD FUNCTION: RECEPTOR FOR THE ACTIVATED RECEPTOR. THE RESULTING RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTEDLYTIC ACTIVATION WHICH INITIATES THE SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APOPTOSIS (BY SIMILARITY).

1. SUBURIT: TWE BINDING TO THE EXTRACELLULAR DOMAIN OF TWEFI LEADS TO HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS PROVEID A NOVEL MOLECULAR INTERFACE THAT INTERACTS SPECIFICALLY WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD. INTERACTING PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO TWEFI COMPLEX BY THEIR ASSOCIATION WITH TRADD, THIS COMPLEX ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND NET-KAPPA B SIGNALING (BY SIMILARITY).

1. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

                                                                                                                                                                                                                                                                                                                                                                                                                                                     RECRUITS CASPASE 8 TO THE ACTIVATED RECEPTOR. THE RESULTING AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTEDLYTIC ACTIVATION WHICH INITIATES THE SUBSEQUENT CASCADE OF CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APOPTOSIS (BY SIMILARITY).

1. SUBSUTIT: THE BINDING TO THE EXTRACELULIAR DOMAIN OF THERI LEADS TO HOMOTRIMERIZATION. ONCE AGGREGATED THE RECEPTORS DEATH DOMAINS PROVIDE A NOVEL MOLECULAR INTERFACE THAT INTERACT'S SPECIFICALLY WITH THE DEATH DOMAIN OF TRADD. VARIOUS TRADD-INTERACTING PROTEINS SUCH AS TRAFS, RIP AND POSSIBLY FADD, ARE RECRUITED TO THERI COMPLEX BY THEIR ASSOCIATION WITH TRADD. THIS COMPLEX ACTIVATES AT LEAST TWO DISTINCT SIGNALING CASCADES, APOPTOSIS AND NE-KAPPA B SIGNALING (BY SIMILARITY).

1. SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.
                                                                                                                                                                                                                  CHAIN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           207
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ADAPTOR MOLECULE FADD RECRUITS CASPASE-8 TO THE ACTIVATED RECEPTOR. THE RESULTING AGGREGATE CALLED THE DEATH-INDICING RECEPTOR. THE RESULTING AGGREGATE CALLED THE DEATH-INDICING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTEDLYTIC ACTIVATION. ACTIVE CASPASE-8 INITIATES THE SUBSEQUENT CASCADE CASPASES (ASPARATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APOPTOSIS. FAS-MEDIATED APOPTOSIS MAY HAVE A ROLE IN THE INDUCTION OF PERIPHERAL TOLERANCE, IN THE ANTIGEN-STIMULATED SUICIDE OF MATURE T-CELLS, OR BOTH (BY SIMILARITY).

SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

DOMAIN: CONTAINS A DEATH DOMAIN INVOLVED IN THE BINDING OF FAD AND MAYBE TO OTHER CYTOSOLIC ADAPTOR PROTEINS.
                                                                                                                                                                                                                                                                                                                                                                                                              s SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RECEPTOR. THE RESULTING AGGREGATE CALLED THE DEATH-INDUCING SIGNALING COMPLEX (DISC) PERFORMS CASPASE-8 PROTECLYTIC ACTIVATION. ACTIVE CASPASE-8 HITTIATES THE SUBSEQUENT CASCADE CASPASES (ASPARTATE-SPECIFIC CYSTEINE PROTEASES) MEDIATING APOPTOSIS. FAS-MEDIATED APOPTOSIS MAY HAVE A ROLE IN THE APPOPTOSIS MAY HAVE A ROLE IN THE INDUCTION OF PERIPHERAL TOLERANCE, IN THE ANTIGEN-STIMULATED SUICIDE OF MATURE T-CELLS, OR BOTH (BY SIMILARITY). SUBCELLULAR LOCATION: TYPE I MEMBRANE PROTEIN.

DMAIN: CONTAINS A DEATH DOMAIN INVOLVED IN THE BINDING OF FALAND MAYBE TO OTHER CYTOSOLIC ADAPTOR PROTEINS.
